

Hair Loss Control Clinic

With custom, multi-therapeutic programs that include supplements, haircare products and low-level laser therapies, Hair Loss Control Clinic puts a halt to progressive hair thinning and loss.

When the Hair Loss Control Clinic (HLCC) in Latham, New York, was still a small, single location, current President Bill Blatter became a steadfast client. “The treatments were amazing; I re-grew all the hair that I had lost in the previous five years,” says Blatter. “Because my background was in marketing and sales, I offered to help grow the clinic’s business. Eventually, after the original owner decided to retire, I bought the business. Today, we have 140 centers and 400 affiliates in 28 countries. We make and distribute our own products, including several Class IIIA, low-level light lasers (LLLTs), which have been cleared by the FDA for the treatment of hair loss. With the staggering number

of men and women experiencing thinning and baldness, we’ve been providing an additional revenue stream for medical offices and salons via effective treatment programs, tremendous education opportunities and scientific devices to measure progress for the past 25 years. We also work with salons to create effective ad campaigns through innovative avenues, such as GoogleAdWords, which allow us to monitor responses. From A to Z, our philosophy is one of mutual success.

HLCC offers one- and two-day courses, support through its network of physicians and nurses, some of whom work at the company’s flagship center, and online and interactive seminars that are held on a frequent basis.

“We make several cool laser models that can be purchased through our programs,” informs Blatter. “They cost as little as \$98 and top out at around \$30,000. All of them emit FDA-cleared 650 nm of red laser light—which doesn’t require physician involvement—but some are more effective than others, due to the number of diodes and panels, or how they’re constructed.

“When clients complete their course of in-house treatments, or are

traveling, salons can retail handheld devices to help them maintain their results,” Blatter continues. “The initial salon investment typically ranges from \$2,995 to \$9,999. Because clients spend an average of \$2,500 to \$3,500 per year for in-salon laser treatments, it takes very few clients to recoup their initial investments.”

Taking a multi-therapy approach to hair loss, HLCC also offers advanced versions of minoxidil serums with saw palmetto and topicals that have as many as 11 different DHT blockers. “We also distribute scalp therapy products that remove sebum to enhance topical absorption, paraben- and SLS-free shampoos that are formulated with DHT blockers and much more.
